TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, Ruby, Spark
Web & Mobile: React, React Native, React Native Web, Redux, GraphQL, Node.js, Flask, Ruby on Rails
Data Pipeline: Kafka, Kinesis, Databricks, PySpark, Redis
Database and Analytics: MySQL, PostgreSQL, Delta Tables, BigQuery, Snowflake, Mode, Periscope, Looker
Tools: AWS, GCP, Cluade, Codex, Docker, Kubernetes, Terraform, Jenkins, CircleCI, Datadog, Sentry, GitHub, Figma

INDUSTRIAL EXPERIENCE

Full stack Engineer, Brigit **Sep 2022 – Present**

Senior Software Engineer, Line of Credit **Mar 2024 – Present**

- Founding engineer on the Line of Credit pod; partnered with design and product to launch a new credit product from scratch and scale it from 0 to 100K+ customers.
- Built the full onboarding and post-onboarding experience in React Native as the sole front-end engineer, shipping to iOS and Android in the Brigit app.
- Led 15+ A/B experiments across onboarding, activation and retention, and reduced delinquency by 78%.
- Part of on call and SEER (Software Engineering Excellence Roundtable) team

Software Engineer, Credit Builder **Sep 2022 – Mar 2024**

- Delivered the two-tier pricing launch (Credit Monitoring and Identity Protection) end to end, building primer, enrollment and post-onboarding flows in React Native and GraphQL integrated with the Array API.
- Designed and built ACH return-rate mitigation: automated autopay shut-off driven by payment failures and card status, skipped-payment states, and a same-day manual payment flow, reducing ACH returns by 83%.
- Built a payment reconciliation service that detects and repairs inconsistent or uninitiated installment payments and savings disbursals, and extended Metro 2 credit bureau reporting to closed and one-off accounts.
- Shipped onboarding funnel optimizations and A/B experiments across iOS, Android and React Native Web, plus self-service savings disbursals and payment adjustments, lifting enrollment conversion by 43%.

Java, React Native, React, TypeScript, Redux-Saga, GraphQL, Kafka, Segment, Snowflake, GCP

Senior Software Engineer, OneSignal **Jun 2021 – Jul 2022**

- Built features for OneSignal's customer messaging platform across the React front end and Rails/gRPC back-end services.
- Shipped A/B testing, an HTML editor, drafts and pre-headers for the email channel, closing key feature gaps against competing email products.
- Built a React/TypeScript demo app that sends web push notifications to vikash.dev through OneSignal's public API.

React, Redux, TypeScript, Ruby on Rails, PostgreSQL, gRPC, Redis, Kafka, CircleCI

Senior Software Engineer, StrongArm Technologies **Dec 2017 – Jun 2021**

- Tech lead for a remote team of ~10 engineers building the company's web and mobile applications.
- Defined the architecture and design patterns for a scalable client-facing web application used by 10,000+ users.
- Re-architected the React Native/Android app, cutting fatal errors by 95%+.
- Built front-end and back-end services for the Smart Dock (FUSE) React Native/Android app to help industrial athletes lift more safely, including a gamified real-time Safety Score and leaderboard.
- Built an athlete roster management platform on a microservice architecture, plus a client-facing insights dashboard used for client onboarding, sales and investor demos.
- Built a real-time pipeline streaming IoT events through Kinesis into Databricks Delta tables with PySpark.
- Managed AWS infrastructure as code with Terraform and Vault, and built Jenkins CI/CD and data processing pipelines.

React JS, React Native, TypeScript, Redux, Angular, Python, PySpark, Databricks, Kinesis, BigQuery, Node JS, MySQL, PubNub, Terraform, Vault, Docker, Jenkins, AWS

Software Engineer, Tricon Infotech LLC **Feb 2017 – Nov 2017**

- Built a drag-and-drop widget platform for composing official documents such as newsletters.
- Built and maintained continuous deployment infrastructure for offsite development teams.
- Won first prize at a company hackathon with an Alexa skill that acts as a virtual receptionist.

React JS, MobX, Express JS, Python, Flask-Ask, Twilio, AWS, MongoDB, GitHub

Research & Development Engineer, Intersection Inc. **Jun 2016 – Dec 2016**

- Created an SMS chatbot that helped visitors navigate the new Hudson Yards neighborhood in NYC.
- Built grocery item recognition and localization for Walmart shopping carts to cut checkout time and remove the need for staff assistance, plus a React front end to visualize the model for the client.

OpenCV, Python NLTK, TensorFlow, Convolutional Neural Networks, AdaBoost, React JS, GCP, Twilio

EDUCATION

New York University, New York, NY **2016**

M.S. in Computer Engineering
